Model 11089

Needle Probe Thermometer

The Needle Probe Thermometer features a reduced tip that is ideal for measuring temperature of “thin mass” foods such as meat patties, chicken and fish fillets per the FDA Food Code 4-302.12(B). The thermometer is designed and constructed under exacting standards to meet and exceed specifications required for commercial and professional uses.

Features

1. O-ring sealed construction is the secret to superior strength and durability of the casing.
2. Hold feature freezes display reading until pressed again or power is off.
3. Smooth membrane surface and Touch-Pad efficiently seal against water, dirt, grease, and other intrusions.
4. Indicates CAL, °C/°F buttons

Food Safety Tips

- Food Danger Zone 41°F to 140°F (5°C to 60°C) where bacteria grows more rapidly
- Microwaves cook food unevenly. Check temperature in several spots
- Ideal for measuring temperature of 'thin mass' food as defined by FDA Food Code 4-302.12(B)

Caution

Do not expose unit to temperature over 190°F (88°C) or use in ovens or other heating equipment. Damage may result. Only the sensor tip can be exposed over 190°F (88°C). When replacing battery, make sure all screws are tightened after opening back to insure waterproof integrity.
